**Technological Reference Center - CRT.**  
Testing solutions before they are introduced  
in the customer's environment.

**The CRT is more than just a center. It's a symbol of Embratel quality.**

- In its almost 40 years of existence, Embratel has pursued excellence in developing solutions for Brazil's nationwide market. Attesting to this pursuit is our Technological Reference Center – CRT – located on Fundão Island, near the Cepel and the Cenpes research centers and the Rio de Janeiro State Technological Park. The CRT is a high-tech center where your company can learn about, test and confirm the effectiveness of new technologies and solutions that can then be integrated to develop your business.

**From research excellence to practical application**

- The CRT is installed in a 30,000 m<sup>2</sup> where we maintain a complete research and development structure, and where our suppliers and both domestic and foreign customers, as well as other research centers, meet with the object of further enhancing our telecommunications services. Based on the model of our operating plant, we conduct tests, projects and research alongside our partners, in an environment specifically designed for performing simulations, striving to add value, to create new business opportunities and to establish increasingly higher quality standards.

**Quality recognized in Brazil and throughout the world**

- Accreditation of our laboratory by Inmetro (Brazil's National Institute of Metrology, Standardization and Industrial Quality), according to the ISO 17025/2001 standard, is the international recognition for the work developed by the CRT and also represents an added quality guaranty for its customers that can rest assured of finding customized solutions here for their needs, regardless of their size or line of business.

**Gaining a competitive edge for your company and bringing it closer to the whole world**

- Bringing the whole world closer should be the major goal of any telecommunications company. With CRT's help, Embratel can meet this goal with greater reliability and speed.

**When a solution comes already tested, approved, and ready to be introduced in your company, you can be sure of gaining more and better results for your business. This is competitiveness in constant evolution, because all successful companies have Embratel quality at their side.**
